IPHC MMUSO PLATFORM

Integrated Church Membership, Attendance, Ceremonies, Payments, Business & Media Management System

1. Overview

The **IPHC MMUSO Platform** is a digital church management system designed to modernise and centralise the administration of the church. It can be developed as a web platform, mobile application, or a combination of both.

The platform will connect **members, branches, regions and Silo administration** through one secure digital ecosystem, covering membership, attendance, ceremonies, payments, business networking, communication and church media.

2. Key Platform Features

Membership Management

Each member will have a digital profile containing information such as:

- Full name and profile picture
- Membership number
- Branch and section
- Family members
- Qualifications
- Contact and address details
- Next of kin and marriage status

Branches will be able to register members, update information, manage membership cards and generate reports.

Digital Membership QR Card

Every approved member will receive a physical and/or digital membership card containing a unique **QR code**.

The QR code will provide a secure and efficient way to identify members and record their participation in church services and ceremonies.

Attendance & Check-In

At every church service, members will present their QR membership card at the entrance. The code will be scanned and attendance automatically recorded.

The system can capture the member, branch, section, date, time, service and location, eliminating manual attendance registers.

Silo Ceremonies

The platform will include a **Silo Calendar of Ceremonies**, allowing members to view upcoming ceremonies and pre-register where required.

At the Silo, the same QR membership card can be scanned to verify registration and record attendance, helping improve crowd management, planning and security.

Payments

Members will be able to access approved church payment categories such as **Tything/Karolo, Polokano, Monthends, Sethephu and other approved contributions**.

Digital payments can reduce cash handling, improve reconciliation and provide better financial records and reporting.

FLG Empire Business Directory

The platform will provide a business directory where church members can register and promote their businesses, products and services.

This will encourage **member-to-member commerce, networking, business visibility and economic empowerment** within the church community.

Church Media

The platform will provide a central media environment for approved:

- Sermons
- Videos and pictures
- Vlogs
- Announcements
- Ceremony content
- Educational material

- Historical church content

This will improve communication and help preserve the church's history digitally.

3. Administration & Reporting

Church leadership will have access to a central dashboard showing key information such as:

- Total membership
- Branches and regions
- Attendance
- Ceremony registrations and check-ins
- Payment activity
- Business registrations
- Media activity

Different access levels can be provided to national, regional, branch, finance, media and system administrators.

The reporting system will provide membership, attendance, financial and ceremony reports to support better planning and decision-making.

4. Key Benefits

For Church Leadership

- Accurate and centralised information
- Better membership visibility
- Improved attendance monitoring
- Better ceremony planning
- Improved resource allocation
- Stronger administration and accountability

For Branches

- Digital registration
- Reduced paperwork
- Faster member verification
- Automated attendance records
- Branch-level reporting
- Easier member management

For Members

- Digital membership identity
- Faster service check-in
- Online ceremony registration
- Convenient approved payments
- Access to church media
- Access to member-owned businesses
- Digital church communication

The platform is therefore designed to become a **management and decision-support system**, rather than simply a membership database.

5. Security & Accountability

The system will provide controlled user access, secure authentication, role-based permissions, encrypted data transmission, backups and audit logs.

QR check-ins will create digital records of member participation, supporting attendance verification, access management and crowd monitoring during major church activities.

6. The Digital Member Journey

Register → Verify → Receive QR Membership Card → Attend Service → Scan QR → Attendance Recorded → Register for Ceremony → Silo Check-In → Make Approved Payments → Access FLG Empire → Access Church Media

This creates a connected experience from the member's initial registration through their ongoing participation in the church.

7. Conclusion

The **IPHC MMUSO Platform** is envisioned as a complete digital transformation solution that brings together **membership, attendance, ceremonies, payments, business networking, communication and church media** in one platform.

It will reduce reliance on manual processes, improve accountability, provide leadership with reliable information and give members convenient digital access to church services.

VISION

“One Church. One Membership. One Digital Identity. One Connected Community.”
