Prepared by Ntate Tumelo Lekolwane

IPHC MMUSO PLATFORM

Integrated Church Membership, Attendance, Ceremonies, Payments, Business & Media Management System

1. Executive Summary

The **IPHC MMUSO Platform** is a comprehensive digital church management system designed to modernise the administration, membership management, attendance monitoring, financial contributions, ceremony registration, business networking and media distribution of the church.

The platform can be developed as a **WordPress-based web platform, mobile application, or a combination of both**, providing church leadership with a centralised digital environment through which members, branches, regions and church administration can efficiently manage church activities.

The system will introduce a secure **digital membership profile and QR-code membership card** for every registered member. The QR code will be used to record attendance at regular church services, special ceremonies and activities at branch and Silo level.

The objective is not simply to digitise church records, but to create a connected **IPHC MMUSO digital ecosystem** that improves accountability, member engagement, administration, communication and financial management across the church.

---

2. Importance of the IPHC MMUSO Platform

As the church continues to grow, maintaining accurate records using manual registers, paper forms, spreadsheets and disconnected systems becomes increasingly difficult.

The IPHC MMUSO Platform will provide one central source of information for:

- Membership

- Attendance
- Branch administration
- Silo ceremonies
- Membership cards
- Payments and subscriptions
- Church business directory
- Church media
- Reporting and analytics
- Member communication
- Event and ceremony registration

The platform will enable church leadership to make informed decisions using accurate and up-to-date information rather than relying solely on manual records.

Key strategic importance

1. Centralised church database

All approved member information can be maintained within one secure platform, reducing duplication and loss of records.

2. Accurate attendance monitoring

Every member can be checked in electronically using their membership QR code, allowing the church to understand attendance patterns at branch and ceremony level.

3. Improved accountability

Digital records provide greater visibility over registrations, attendance, payments and participation.

4. Better member engagement

Members will have access to their profiles, ceremonies, church media, payment services and church-related opportunities through one platform.

5. Improved financial administration

Digital payment and subscription functionality can assist in managing Tything/Karolo, Polokano, Monthends, Sethephu and other approved contributions.

6. Preservation of church information

Member profiles, photographs, videos, ceremony information and other approved church content can be stored and organised digitally.

---

3. PLATFORM STRUCTURE

The IPHC MMUSO Platform will consist of the following major modules:

1. Church Administration Dashboard
2. Branch-Level Registration
3. Membership Management
4. Digital Membership QR Card
5. Attendance & Check-In System
6. Silo Calendar of Ceremonies
7. Ceremony Pre-Registration
8. Silo Compound Check-In
9. Membership Card Printing
10. Subscriptions & Payment Gateway
11. FLG Empire Business Directory
12. Church Media Platform
13. Reporting & Analytics
14. Regional and Branch Management
15. Member Communication
16. User Access & Security

---

4. BRANCH-LEVEL REGISTRATION

Each church branch will have access to the platform to register and manage its members.

Branch administrators will be able to:

- Register new members
- Update member information
- Upload profile photographs
- Allocate members to the appropriate section
- View attendance
- Register members for ceremonies
- Manage membership cards
- View approved payment records
- Generate branch reports

This will create a structured digital database across branches, regions and the wider church.

---

5. MEMBERSHIP REGISTRATION

Each member will have a digital profile containing relevant information.

Proposed Member Information

- Full Name
- Profile Picture
- Biography
- Qualifications (Education background)
- Family Members (If applicable)
- Age
- Section
- Email Address
- Physical Address
- Postal Address
- Branch
- Next of Kin
- Marriage Status

Church Sections

The system will support the appropriate organisational sections, including:

- EXCO
- BaPriest
- Bo Ntate
- Difate
- Dinaledi
- Badisa
- Ayobaness

Additional sections can be added by authorised church administrators as the organisational structure develops.

---

6. DIGITAL MEMBERSHIP CARD

Upon successful registration and approval, every member can be issued with a unique digital membership identity.

The membership card can contain:

- Member name
- Profile photograph
- Membership number
- Branch
- Section
- QR code
- Other approved identification information

The QR code will provide a fast and convenient method of identifying members within the church system.

Benefits

- Reduces reliance on paper registers
- Prevents duplicate attendance records
- Speeds up entry into services
- Provides reliable attendance data
- Makes member identification easier
- Supports ceremony registration
- Creates a consistent membership identification system

---

7. CHURCH SERVICE CHECK-IN SYSTEM

At every church service, members will present their membership QR-code card at the entrance.

A scanning device will scan the QR code and automatically record the member's attendance.

Check-In Process

Member arrives → QR Card presented → QR Code scanned → Member verified → Attendance recorded → Member enters service

The system can record:

- Member
- Branch
- Section

- Date
- Service
- Time of check-in
- Location
- Ceremony/event

This eliminates the need for members to manually sign attendance registers.

---

8. ATTENDANCE MANAGEMENT

The attendance module will provide church leadership with real-time and historical attendance information.

Reports can include:

- Daily attendance
- Weekly attendance
- Monthly attendance
- Branch attendance
- Regional attendance
- Section attendance(Makgotla)
- Ceremony attendance
- Member attendance history
- First-time attendance
- Attendance trends

Leadership can use these reports to understand participation and identify areas requiring greater engagement.

Example

A branch administrator could quickly determine:

> How many members attended Sabbath service?
>
> Which sections had the highest attendance?
>
> How many registered members were absent?
>
> How many members attended a particular ceremony?
>
> How has branch attendance changed over six months?

9. SILO CALENDAR OF CEREMONIES

The platform will contain a dedicated **Silo Calendar of Ceremonies**.

Members will be able to view upcoming ceremonies and, where required, pre-register through the platform.

The membership QR card will then be used to verify and check in registered members when they enter the Silo compound.

Proposed Annual Ceremony Calendar

Month	Ceremonies
January	Monthend Ceremony
February	Monthend Ceremony
March	Ditebogo tsa Sethephu; Dikgaboi
April	Mokete wa Paseka
May	Phaphama; Pulo Ya Silo; Monthend
June	Mokete wa Ditebogo; Dinaledi Region; Monthend
July	Mokete wa Sethephu
August	Poelano; Monthend; Dikgaboi
September	Mokete wa Selemo; Dinaledi Region; Mokete wa Metsi
October	Retsene Retsene
November	Monthend; Motsepe Foundation National Prayer; Dikgaboi
December	Mokete wa Paballo

The calendar should remain configurable so authorised administrators can add, remove or modify ceremonies when the official church calendar changes.

10. SILO PRE-REGISTRATION

For major Silo ceremonies, members can pre-register through the platform.

The registration process can capture:

- Member name
- Membership number
- Branch
- Region
- Section
- Number of accompanying family members, where applicable
- Ceremony being attended
- Registration status
- Check-in status

This gives church leadership advance visibility of expected attendance.

Benefits

- Better crowd planning
- Improved security
- Better accommodation planning where applicable
- Improved resource allocation
- Faster entry
- Reduced congestion
- Accurate ceremony attendance records
- Better emergency and crowd-management planning

---

11. SILO CHECK-IN

Upon arrival at the Silo compound, the member's QR membership card will be scanned.

The system will verify the member and record their attendance.

This can provide the church with a live overview of:

- Number of members checked in
- Branches represented
- Regions represented
- Sections represented

- Ceremony attendance
- Registration versus actual attendance

For major ceremonies, multiple scanning points can be deployed to reduce queues.

---

12. CHECK-IN INFRASTRUCTURE

The system will be supported by appropriate hardware.

Membership Cards

Physical membership cards containing unique QR codes.

Membership Card Printer

A dedicated card printer can be used to issue and replace membership cards.

Scanning Devices

Scanning devices can be positioned at:

- Church entrances
- Silo entrances
- Ceremony gates
- Registration points
- Designated access-control points

The system can be designed to support smartphones, tablets or dedicated QR scanners, depending on the final technical architecture.

---

13. SUBSCRIPTIONS & PAYMENT GATEWAY

The IPHC MMUSO Platform will provide a digital payment environment through which members can make approved church contributions and payments.

Proposed Payment Categories

- Tything / Karolo
- Polokano
- Monthends
- Sethephu
- FLG Empire
- Other approved church payments

Members can access the payment section through their account and select the contribution they wish to make.

Where technically supported, the platform can integrate with approved payment gateways and financial institutions.

Benefits

- Convenient member payments
- Reduced cash handling
- Improved payment records
- Easier reconciliation
- Digital receipts
- Better financial reporting
- Improved transparency
- Reduced administrative workload

All financial functions should be configured according to the church's approved financial policies, authorisation procedures and accounting requirements.

---

14. FLG EMPIRE – CHURCH BUSINESS DIRECTORY

The **FLG Empire** module will create a dedicated business network for church members who own or operate businesses.

Church members will be able to register their businesses on the platform and create a business profile.

Company Directory

Each registered business can have:

- Company Name

- Business Category
- Company Description
- Contact Details
- Physical Address
- Website/Social Media
- Company Logo
- Business Profile
- Company Pictures
- Products and Services

Where enabled, business owners can upload and download approved company profiles.

---

15. BENEFITS OF FLG EMPIRE

The business directory will encourage members to support one another economically.

Instead of looking outside the church community whenever a service is required, members can search the directory for businesses operated by fellow church members.

Example

A member looking for:

- Construction services
- Catering
- Transport
- Legal services
- Accounting
- Graphic design
- Clothing
- Accommodation
- Professional services
- Retail products

can search the FLG Empire directory and identify registered church-member businesses.

Strategic Benefits

Member-to-member commerce

Encourages economic activity within the church community.

Business visibility

Gives member-owned businesses an additional platform to showcase their services.

Networking

Creates opportunities for business owners to connect.

Economic empowerment

Supports entrepreneurship and member-owned businesses.

Church ecosystem

Creates a broader community ecosystem where spiritual, social and economic activities can exist within one platform.

---

16. MEDIA PLATFORM

The IPHC MMUSO Platform will include a dedicated media environment for approved church content.

The media section can include:

- Pictures
- Videos
- Vlogs
- Sermons
- Church announcements
- Ceremony content
- Educational material
- Historical church content
- Other approved church media

The proposed integration with **SABC and other approved media/content partners**, where applicable, can support the publication or distribution of church material through the platform.

---

17. MEMBER-ONLY CONTENT

The platform can provide controlled access to church media.

Where content is designated as member-only, members will log into their accounts before accessing it.

This creates a secure digital environment for approved church material.

Benefits

- Centralised church media
- Preservation of church history
- Easy access to sermons and events
- Better member engagement
- Controlled content access
- Improved communication
- Digital archive of church activities

---

18. CHURCH ADMINISTRATION DASHBOARD

Church leadership will have access to a central administration dashboard.

The dashboard can provide an overview of:

- Total registered members
- Active members
- Branches
- Regions
- Attendance
- Upcoming ceremonies
- Ceremony registrations
- Check-ins
- Payment activity
- Business directory registrations
- Media activity

Different administrators can be assigned different access levels.

Example Access Levels

National Administration

Access to approved church-wide information and reports.

Regional Administration

Access to regional and branch information.

Branch Administration

Access to the branch's membership and attendance information.

Finance Administration

Access to authorised payment and financial records.

Media Administration

Access to approved media publishing functions.

System Administrator

Technical and platform management.

---

19. REPORTING & ANALYTICS

One of the most important benefits of the platform is the ability to transform church information into useful management reports.

Membership Reports

- Total membership
- New registrations
- Membership by branch
- Membership by region
- Membership by section
- Age demographics
- Family structures
- Marriage status
- Membership growth

Attendance Reports

- Daily attendance
- Monthly attendance

- Branch attendance
- Regional attendance
- Ceremony attendance
- Member attendance history
- Attendance trends

Financial Reports

Subject to approved financial access:

- Contributions by category
- Payment volumes
- Payment history
- Branch-level payment summaries
- Monthly reports
- Outstanding/expected payments where applicable

Ceremony Reports

- Number registered
- Number checked in
- Branch representation
- Regional representation
- Attendance percentage
- Registration versus actual attendance

---

20. BENEFITS TO CHURCH LEADERSHIP

The IPHC MMUSO Platform will provide leadership with better visibility and decision-making capabilities.

Leadership can use accurate information to:

- Understand membership growth
- Monitor attendance
- Plan ceremonies
- Allocate resources
- Identify branch needs
- Improve communication
- Monitor approved financial activities
- Support member businesses

- Preserve church history
- Improve administration

The platform therefore becomes a **management and decision-support tool**, rather than simply a membership database.

---

21. BENEFITS TO BRANCHES

Branch administrators will benefit from:

- Digital member registration
- Instant member lookup
- QR attendance scanning
- Automated attendance records
- Digital member profiles
- Ceremony registration
- Branch reports
- Reduced paperwork
- Easier communication
- Improved record keeping

This will significantly reduce the administrative burden associated with maintaining physical registers.

---

22. BENEFITS TO CHURCH MEMBERS

Members will have one digital point of access to important church services.

Members can:

- Maintain their profiles
- Access their membership information
- Use their digital membership card
- Check in to services
- Register for ceremonies
- Make approved payments
- Access church media
- Discover member-owned businesses

- Update selected personal information
- Receive church announcements

This makes the relationship between the member and the church more convenient and digitally connected.

---

23. IMPROVED SECURITY AND ACCOUNTABILITY

The platform can improve security by creating digital records of access and participation.

Every QR check-in can generate a record containing the relevant member, date, time, location and activity.

For major ceremonies, this can assist with:

- Crowd monitoring
- Access management
- Attendance verification
- Identification of registered attendees
- Prevention of duplicate registrations
- Event reporting

The system should also include appropriate data-protection controls to ensure that personal information is only accessible to authorised users.

---

24. DATA SECURITY & PRIVACY

Because the system will contain personal information, appropriate security measures will be essential.

These should include:

- Secure user authentication
- Role-based access
- Password protection
- Encrypted data transmission
- Secure database management

- Regular backups
- Audit logs
- Controlled administrator access
- Data recovery procedures
- Privacy policies
- Member consent and appropriate data governance

Sensitive member information should only be visible to authorised personnel based on their responsibilities.

---

25. DIGITAL TRANSFORMATION OF THE CHURCH

The IPHC MMUSO Platform represents an opportunity to move the church from fragmented, paper-based administration toward a modern digital ecosystem.

Instead of having separate processes for:

Membership + Attendance + Ceremonies + Payments + Business + Media

the MMUSO Platform brings them together.

The result:

ONE MEMBER

↓

ONE DIGITAL PROFILE

↓

ONE MEMBERSHIP QR CODE

↓

ONE CHURCH PLATFORM

↓

CONNECTED BRANCHES

↓

CONNECTED REGIONS

↓

CONNECTED SILO CEREMONIES

↓

CONNECTED CHURCH COMMUNITY

---

26. EXPECTED ORGANISATIONAL BENEFITS

The implementation of MMUSO can deliver the following long-term benefits:

Operational Efficiency

Less paperwork and fewer manual administrative processes.

Accurate Information

A centralised and continuously updated membership database.

Faster Access

Members can be identified and checked in quickly.

Better Planning

Leadership can use real attendance and registration data when planning activities.

Financial Convenience

Members have access to convenient digital payment channels.

Member Engagement

Members remain connected to church activities through the platform.

Economic Empowerment

FLG Empire creates visibility for member-owned businesses.

Digital Communication

Church media and announcements can be distributed through one platform.

Institutional Memory

Important church information, photographs and videos can be digitally preserved.

Scalability

The system can grow as the number of branches, regions and members increases.

---

27. FUTURE DEVELOPMENT OPPORTUNITIES

The platform can be designed with the ability to introduce additional features in future, including:

- Cashless system at Silo
- Mobile applications for Android and iOS
- Push notifications
- Digital announcements
- SMS notifications
- WhatsApp integration
- Online counselling appointment requests
- Prayer request management
- Badisa management
- Dinaledi management
- Bo Ntate management
- Ayobaness management
- Volunteer management
- Church asset management
- Facility booking
- Accommodation management
- Donation campaigns
- Online sermons
- Live streaming

- Digital certificates
- Automated member communication
- Advanced analytics
- Regional dashboards
- National church dashboard

---

28. PROPOSED MEMBER JOURNEY

The complete digital member journey can operate as follows:

STEP 1 – REGISTRATION

Member registers at branch level.

STEP 2 – VERIFICATION

Branch administrator verifies the member's information.

STEP 3 – MEMBERSHIP CARD

Member receives a physical and/or digital membership card containing a unique QR code.

STEP 4 – CHURCH SERVICE

Member presents the QR card at the entrance.

STEP 5 – SCANNING

QR code is scanned.

STEP 6 – ATTENDANCE

Attendance is automatically recorded.

STEP 7 – CEREMONY

Member views the Silo calendar and pre-registers for applicable ceremonies.

STEP 8 – SILO CHECK-IN

Member presents the same QR membership card at Silo.

STEP 9 – PAYMENT

Member accesses the payment section for approved contributions.

STEP 10 – COMMUNITY

Member accesses FLG Empire and discovers businesses operated by fellow members.

STEP 11 – MEDIA

Member logs into the platform and accesses approved church pictures, videos, vlogs and other media.

---

29. CONCLUSION

The **IPHC MMUSO Platform** is envisioned as a comprehensive digital transformation initiative for the church.

Its importance extends beyond simply replacing paper membership registers. The platform creates an integrated digital infrastructure connecting **members, branches, regions, Silo ceremonies, attendance, payments, businesses and church media**.

By introducing digital membership profiles and QR-code membership cards, the church will be able to create a consistent method of identifying members and recording participation across its activities.

The Silo Ceremony Calendar and pre-registration functionality will improve planning and crowd management, while the payment module can provide members with convenient digital contribution channels.

The **FLG Empire** business directory will strengthen the economic relationship between church members by creating a platform through which members can discover and support one another's businesses.

The media platform will provide a central digital home for approved church content, helping preserve the church's history while improving communication and member engagement.

Ultimately, MMUSO can become a **single digital ecosystem for the church**, providing leadership with reliable information, branches with efficient administrative tools and members with convenient access to church services.

VISION

“One Church. One Membership. One Digital Identity. One Connected Community.”

The IPHC MMUSO Platform will position the church to manage its growing membership, activities and resources more efficiently while creating a modern digital foundation capable of supporting the church for many years to come.
